

Irrigation

Weir-type Diaphragm, 3-way Solenoid-controlled Globe Valve

DOROT S75 ELD3/M (3W), is a Weir-type diaphragm, automatic, solenoid-controlled globe valve, with a 3-way solenoid, and selector valve for manual override. The valve opens when the solenoid is energized and closes drip-tight when the solenoid is de-energized.

Features and Benefits

Durable, corrosion-resistant materials	High resistance to chemicals and fertilizers
Operates up to 12 bar (175 psi)	Able to handle demanding high-pressure systems
Full selection of features available: control functions, sizes, varied end connections	Simplifies installation and supports diverse applications
Asymmetric diaphragm with large flow cross section	Allows smoother operation; high flow capacity with very low head losses, for enhanced efficiency
Flat bonnet design with small control chamber for quick opening/closure	Enables more precise regulation, improved responsiveness and reduced downtime
Effective operation under high/low pressure conditions	Suitable for many diverse irrigation methods

Technical Specifications

Size Range		3/4"-8"R / DN20-DN200R
Working Pressure		10 bar / 145 psi, 12 bar / 175 psi
Max. Water Temperature		60° C / 140° F
End Connections		Grooved ASME/ANSI AWWA 606
		Threaded BSP / NPT
		Flanged Universal
Construction Materials	Body & Cover	Glass Reinforced Polyamide, Polypropylene
	Spring	Stainless Steel 302
	Diaphragm	NR / EPDM
	Fittings & Control Trim Devices	Glass Reinforced Polyamide, Polypropylene
	Control Trim Tubes	Polyethylene

* Other options are available upon request.

Main Control System Components

No.	Component
1	Main Valve
2	Self-flushing filter
3	3-way Position Selector Valve
4	3/2-way Solenoid Valve

Typical Installation

Purchase Specifications

- Hydraulic globe valve with Weir-type diaphragm, solenoid-operated.
- No stem, shaft, or guide bearing inside the water passage.
- Operated by line pressure or external hydraulic/pneumatic actuation.
- Valve position is controlled by an electric solenoid valve.

Design Considerations

- Select valve size based on expected maximum flow and acceptable head loss.
- If upstream pressure is low or if the valve is expected to stay in open position for long periods, choose a low-pressure diaphragm.
