

Excess Flow Shut-Off Valves

Waterworks

Excess Flow Shut-Off Valve

OCV 128, an excess flow shut-off valve, closes when the flow rate set point is exceeded. Manual reset shall be required to re-open the valve. This valve can be employed anywhere excessive flow rates must be positively prevented. It is particularly useful as a protective device against downstream line rupture.

Features & Benefits

- Valve trips closed when predetermined flow rate is detected
- Built-in orifice plate for sensing flow rate
- Valve must be manually reset to re-open
- Flow rate is adjustable with single screw
- Adjustable response speed
- Can be maintained without removal from the line
- Factory tested and can be preset to your requirements

Certification & Compliance

UL Water Quality / NSF 61-G & 372

NSF-ISO Quality System (9001)

American-Made: American Recovery & Reinvestment

Factory Mutual Approved

ABS Type Approval

CE (Conformité Européenne) Compliance

Typical Applications

Irrigation Systems

Municipal Distribution Systems

Pump Systems

Industrial Plants

Hotels/Condominiums

Commercial Plumbing

Model 128 Excess Flow Shut-Off Valves

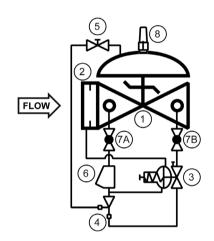

The latched open, spring loaded pilot, sensing the differential across the integral orifice plate, located in the valve inlet flange, remains open as long as the flow rate is below a predetermined trip point. If flow rate rises to the trip point, the pilot closes, causing the main valve to close. The pilot remains closed until manually reset by pushing the reset button on the end of the pilot.

Components

The OCV 128 consists of the following components, arranged as shown on the schematic diagram:

- 1 OCV S65 Basic Control Valve
- 2 OCV 120 Orifice Plate
- 3 OCV 1380 Excess Flow Pilot
- 4 OCV 126 Ejector Fixed orifice pilot system supply restrictor
- 5 OCV 141-2 Needle Valve (Adjustable Response Speed
- 6 OCV 159 Y-Type Strainer Protects pilot system from dirt/debris
- 7 OCV 141-4 Isolation Ball Valves
- 8 OCV 155 Visual Indicator (Optional)

Excess Flow Shut-Off Valves

Flow Characteristics

 $DP = sg (Q/Cv or Kv)^2$

where: Q = Flow rate in USGPM (Standard) or Q = Flow rate in cubic meters/sec (Metric)

Cv = Flow rate in USGPM @ 1 psi pressure drop (Standard) or

Kv = Flow rate in cubic meters/sec @ 1 bar pressure drop (Metric)

DP = Pressure drop in psi (Standard) or DP = Pressure drop in bar (Metric)

sg = Specific gravity of line fluid

Engineering Specifications

The excess flow shut-off valve shall be a single-seated, line pressure operated, diaphragm actuated, pilot controlled valve. The valve shall seal by means of a corrosion-resistant seat and a resilient, rectangular seat disc. These, and other parts, shall be replaceable without removing the valve from the line. The stem of the main valve shall be guided top and bottom by integral bushings. Alignment of the body, bonnet and diaphragm assembly shall be by precision dowel pins. The diaphragm shall not be used as a seating surface, nor shall the pistons be used as an operating means. The orifice plate shall be integrally installed in the valve inlet flange. The pilot system shall be furnished complete and installed on the main valve. It shall include a needle valve speed control, Y-Type strainer and isolation ball valves. The excess flow shut-off shall be operationally and hydrostatically tested prior to shipment. The main valve body and bonnet shall be ductile iron per ASTM A536, Grade 65-45-12. All ferrous surfaces shall be coated with 4 mils of epoxy. Elastomers (diaphragms, resilient seats and o-rings) shall be EPDM. The control pilot, needle valve speed control, isolation ball valves, control line tubing, and the orifice plate shall be stainless steel. The excess flow shut-off valve shall be suitable for shutting off the flow over a range of <X to X (limited to 4:1)> gpm at pressures ranging from <X to X> psi. The excess flow shut-off valve shall be an OCV 128, as manufactured by OCV, Tulsa, OK, USA.
