

Irrigation

Weir-type Diaphragm, 3-way Remote-controlled Pressure Reducing Globe Valve

DOROT S75 PR/RC/M 3W, is a Weir-type diaphragm, 3-way automatic remote-controlled pressure reducing globe valve, with a selector valve for manual override. The valve maintains a closed position and regulates downstream pressure to a steady, preset value, when the hydraulic relay is not under command.

Features and Benefits

Durable, corrosion-resistant materials	High resistance to chemicals and fertilizers
Operates up to 12 bar (175 psi)	Able to handle demanding high-pressure systems
Full selection of features available: control functions, sizes, varied end connections	Simplifies installation and supports diverse applications
Asymmetric diaphragm with large flow cross section	Allows smoother operation; high flow capacity with very low head losses, for enhanced efficiency
Flat bonnet design with small control chamber for quick opening/closure	Enables more precise regulation, improved responsiveness and reduced downtime
Effective operation under high/low pressure conditions	Suitable for many diverse irrigation methods

Technical Specifications

Size Range		3/4"-8"R / DN20-DN200R
Working Pressure		10 bar / 145 psi, 12 bar / 175 psi
Max. Water Temperature		60° C / 140° F
End Connections		Grooved ASME/ANSI AWWA 606
		Threaded BSP / NPT
		Flanged Universal
Construction Materials	Body & Cover	Glass Reinforced Polyamide, Polypropylene
	Spring	Stainless Steel 302
	Diaphragm	NR / EPDM
	Fittings & Control Trim Devices	Glass Reinforced Polyamide, Polypropylene
	Control Trim Tubes	Polyethylene

* Other options are available upon request.

Main Control System Components

No.	Component
1	Main Valve
2	Self-flushing filter
3	3-way Position Selector Valve
4	Galit Hydraulic Relay
5	3-way Pressure Reducing Pilot Valve
6	Pressure Test Device

Typical Installation

Purchase Specifications

- Hydraulic globe valve with Weir-type diaphragm, pilot and relay-operated.
- No stem, shaft or guide bearing inside the water passage.
- Operated by line pressure or external hydraulic/pneumatic actuation.
- Maintains accurate regulation across the full flow range, without a bypass or throttling plug.
- Controlled by a pressure-reducing pilot valve, to ensure constant outlet pressure, regardless of upstream conditions, and a relay valve.

Design Considerations

- Select valve size based on expected maximum flow and acceptable head loss.
- Large pressure differentials may cause cavitation – consult Aquestia for solutions.
